

job description

role	Human Factors practitioners & researchers	perm/cont	contract
salary range	competitive, dependent on experience,		

PDD has opportunities for talented human factors practitioners to work as part of our discovery team, helping to influence the design of new products and services through the research and analysis of user experience, consumer behaviour and attitudes. With a background in Ergonomics or Human Factors you will have a passion for understanding people, places, and cultures and a real enthusiasm for design.

responsibilities

You'll collaborate with clients, designers, and colleagues to plan research activities, conduct global fieldwork, analyse findings, and translate and communicate those insights for diverse audiences. You'll have gained commercial experience in previous roles and your well-honed communication skills will be essential in consulting with our clients, suppliers and research participants.

Key skills/requirements

Experience

- Solid theoretical and practical grounding in Human Factors, particularly physical ergonomics, is required, preferably with graduate qualification in Human Factors, or a related discipline.
- A successful track record of leading projects to time and budget is advantageous.
- A medical/clinical background is highly desired, but not essential.
- Strong presentation and communication style.
- Fluency in multiple languages is also an advantage, but not required.
- Candidates must be eligible to work in the United Kingdom.

To apply for this position please send a CV to careers@pdd.co.uk
